Django version 1.6.2, using settings 'frikr.settings'

Starting development server at <http://127.0.0.1:8000/>

It worked!

Congratulations on your first Django-powered page.

Of course, you haven't actually done any work yet. Next, start your first app by running `python manage.py startapp [appname]`.

You're seeing this message because you have `DEBUG = True` in your Django settings file and you haven't configured any URLs. Get to work!
